1	Methodology for Water Grid Connected Renewable Energy Based Desalination Plant	4	<p>Dear GCC team,</p> <p>On behalf of Klimfinity Pvt Ltd, we wish to congratulate you for considering the water sector for methodology development. This is an excellent methodology which will help decarbonisation of desalination water sector.</p> <p>While going through applicability conditions we noticed that minimum renewable energy capacity required is 50%. In our humble opinion this is very high. The approach should be more pragmatic starting from 25% increasing 3% every year to make 100% before 2050.</p> <p>It should be worth noting that based on IRENA report mentioned the average renewable capacity in GCC grid is 7.6%.</p>
